HOME GENIES

Website status report · 21 October 2026

About 75% built, and not live yet.
The software is mostly done. What stops it going live is mainly setup and content that only the owner can provide.

What it is

HOME GENIES is a home-business and social-commerce site for women, built in React and FastAPI with MongoDB, in English and Hindi. It was copied from the Anjali Herbal Life project, and all of the old MLM logic has been taken out. HomeGenies sell products through share links and earn points on actual sales. Recruiting people earns nothing on its own.

Codebase: about 6,400 lines across the backend and the pages, with 88 API endpoints.

Done and working

Area	Status
Branding (logo, purple/gold theme, homepage, legal pages in both languages)	**Done**
Sign-up → admin approval → login, plus a hidden admin login	**Done**
Commission engine: 30% direct, 10% referral, 5% team, on the price before GST	**Done, automated test passes**
HomeGenie Points: pending for 7 days, then available (a daily job at 01:30 IST releases them)	**Done**
Points withdrawal requests, with admin approve/reject	**Done**
Cash on delivery: ₹49 fee, commission paid only after the cash is confirmed collected	**Done, automated test passes**
Monthly badges (Bronze ₹10k, Silver ₹25k, Gold ₹50k, Diamond ₹100k)	**Done**
Product options such as Size and Shade, carried through cart → order → invoice	**Done**
Admin panel: Dashboard, Users, Products, Orders, Withdrawals, Reports, Settings, Audit logs	**Done**
Separate database and admin account from Anjali	**Done**

Blocking launch (needs owner input)

1. **No products in the catalogue.** The shop is empty. The saree, fashion, beauty and household list needs to be added.
2. **Online payments are off.** This needs Razorpay live keys and the webhook secret. Cash on delivery works without them.
3. **SMS OTP is off.** This needs a Twilio sender and India DLT approval.
4. **No outbound email.** No email sender is set up.
5. **The admin password is exposed.** It was written in plain text in a git commit message (`190f9bc`) and is now in the git history. Change `ADMIN_PASSWORD` and `ADMIN_PASSCODE`.

Leftover bugs and cleanup (confirmed in the code)

Most bugs from the last test run (iteration 16) are fixed. These are still there:

- **Admin Users table:** still has "Sponsor" and "KYC" columns from the old system (`AdminUsers.js` lines 240–241).
- **Admin Settings:** saving still sends old MLM fields, `activation_amount` and `referral_commission` (`AdminSettings.js` lines 24–25).
- **Register page:** still shows an herbal-capsule photo from the Anjali site (`Register.js` line 207).
- **Login token:** still saved under the name `anj_token`, in browser localStorage rather than a safer httpOnly cookie.
- **Old Anjali test files:** six of them in `backend/tests/` still reference Anjali, along with old Anjali report files in the project's root folder.
- **Not retested:** the full sign-up → approve → login flow was never run end to end after the fixes.

Features not built yet (backlog)

P1 — needed for a real business

- Shipping, delivery tracking and returns (no code for this exists yet)
- One account acting as both seller and customer, with each seller seeing only their own data
- Supplier or hybrid fulfilment

P2 — polish and hardening

- Catalogue search
- Stock and price for each option (e.g. per size or shade)
- Page-by-page lists in the admin screens
- Its own domain name for HOME GENIES
- Removing secrets from the git history

Suggested additions

- Real perks for each badge

- WhatsApp sharing cards for products
- Order status notifications

Suggested next steps, in order

1. Change the admin password and passcode.
2. Load the product catalogue.
3. Clean up the leftover items above and run a full end-to-end test.
4. Set up Razorpay live keys.
5. Build shipping and order tracking.
6. Set up the SMS and email providers.
7. Launch.

Based on a review of the home-genie repository (memory/PRD.md, recent commits and test_reports/iteration_16.json) and direct checks of the source code, 21 Oct 2026.
